DFS Pre-Order: A, B, C, F, D, E, G

DFS Post-Order: F, C, B, E, D, A, G

Toplogical Sort (reverse of DFS Post-Order): G, A, D, E, B, C, F

\* After visiting F, restart on unmarked node G. G would be added to the stack (and forming the last element in both pre-order and post-order traversals)

# Q. Graph Traversal (Undirected Graph)

Give the BFS, DFS pre-order and post-order traversals of this undirected graph, starting from either A. When there are muliple possible orders of visiting the next node, select the next node in alphabetical order.

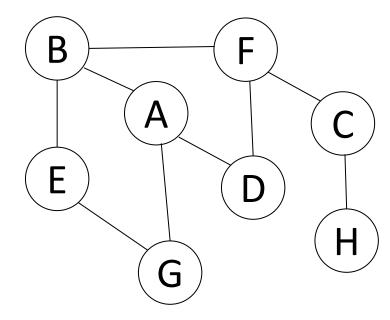

## Q. Graph Traversal (Undirected Graph) ANS

- Starting from node A:
  - Pre-order traversal: A B S C D E H G F
  - Post-order traversal: B D F G H E C S A
  - BFS: ABSCGDEFH
  - (Topological Sort: N/A, since it is only for DAG)

  - The video illustrates pre-order traversal with a stack. The post-order traversal is obtained in the order that the nodes are popped off the stack, (c.f., Slide 29 "DFS Traversals and Topological Sort" in Lecture 12-graphs.pdf)

# Q. Graph Traversal (Undirected Graph)

Give the BFS, DFS pre-order and post-order traversals of this undirected graph, starting from A. When there are muliple possible orders of visiting the next node, select the next node in alphabetical order.

# Q. Graph Traversal (Undirected Graph)

  - Post-order traversal: G E B H C F D A
